## NOTES

\*The power capacity corresponds to the RMS maximum value that can dissipate the loudspeaker when a sinus signal is applied for a period of at least two hours.

Program power is defined as the transducer's ability to handle normal music program material.

\*\* T-S parameters are measured after an exercise period using a preconditioning power test, using a velocity-current laser transducer, and will reflect the long term parameters, once the loudspeaker has been working for a short period of time.

## NOTAS

\*La potencia admisible corresponde a la máxima potencia RMS que puede disipar el altavoz durante al menos dos horas, cuando se le aplica una señal senoidal determinada.

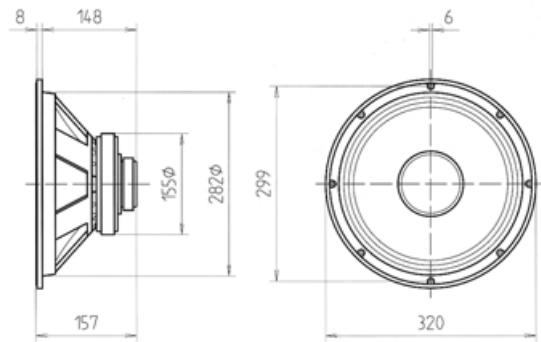

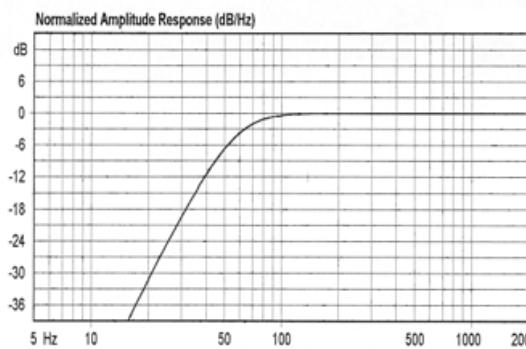

Por potencia programada se entiende la capacidad del altavoz en el manejo de señales transitorias, como sería el proporcionado por el contenido de un pasaje musical normal.

\*\* Los parámetros T-S han sido medidos después de un período de fatiga y estabilización de las suspensiones, mediante transductor láser de velocidad-corriente, y son el reflejo de los parámetros a largo plazo del altavoz, una vez éste haya sido instalado y haya trabajado en un corto espacio de tiempo.

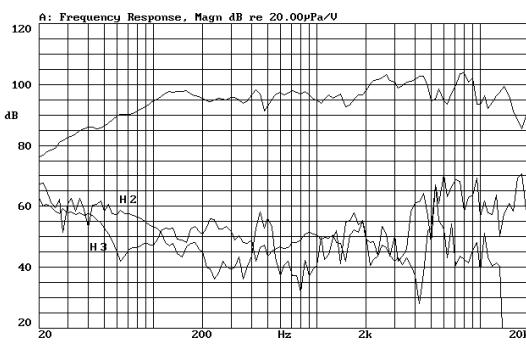

This dual loudspeaker includes, in a single unit, a 12" bass driver and a concentrically mounted compression tweeter. This provides a single point source and reduces phasing problems in the crossover region. The bass driver features a 2" (52 mm) voice coil diameter, attached to a lightweight curvilinear cone, and shows a smoothly extended frequency response up to 7 kHz. The tweeter has excellent efficiency and fast response to transient attacks.

Modelo de 12" que incluye 2 unidades, una de graves para la reproducción de media y baja frecuencia y otra de compresión para alta frecuencia que van montadas concéntricamente y radian de forma puntual, lo que evita problemas de rotación de fase en la zona de transición entre ambos reproductores garantizando una respuesta coherente y de gran calidad.
