

# (( 15G350 )) SOUND REINFORCEMENT

This 15" cone transducer is designed for professional high level, high performance sound reinforcement systems. It features a 3" voice coil diameter, copper wire material. The magnetic structure is vented in order to maximise heat dissipation, increasing power handling while reducing power compression. The result is a loudspeaker that combines high efficiency, extended frequency response and thermal and mechanical durability.

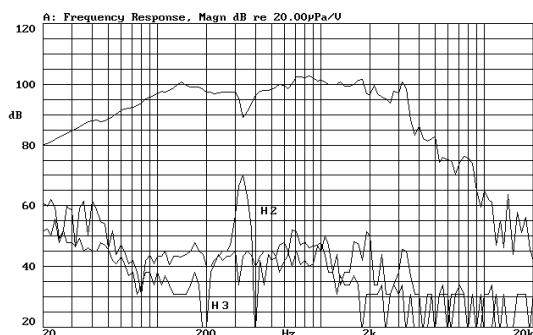

Este transductor de 15" ha sido diseñado para aplicaciones profesionales de alto nivel. Se caracteriza por la utilización de una bobina de 3", circuito magnético simétrico y ventilado, y chasis de aluminio fundido a presión. El resultado es un altavoz que combina alta eficiencia, extensa respuesta en frecuencia y elevada resistencia térmica y mecánica.

## NOTES

\*The power capacity corresponds to the RMS maximum value that can dissipate the loudspeaker when a sinus signal is applied for a period of at least two hours.

Program power is defined as the transducer's ability to handle normal music program material.

\*\* T-S parameters are measured after an exercise period using a preconditioning power test, using a velocity-current laser transducer, and will reflect the long term parameters, once the loudspeaker has been working for a short period of time.

## NOTAS

\*La potencia admisible corresponde a la máxima potencia RMS que puede disipar el altavoz durante al menos dos horas, cuando se le aplica una señal senoidal determinada.

Por potencia programa se entiende la capacidad del altavoz en el manejo de señales transitorias, como sería el proporcionado por el contenido de un pasaje musical normal.

\*\* Los parámetros T-S han sido medidos después de un periodo de fatiga y estabilización de las suspensiones, mediante transductor láser de velocidad-corriente, y son el reflejo de los parámetros a largo plazo del altavoz, una vez éste haya sido instalado y haya trabajado en un corto espacio de tiempo.
